

Intranet in the Microsoft 365 ecosystem

Microsoft 365

Introduction

Advances in technology have made it increasingly difficult for some groups of employees to use advanced intranet tools, which makes them stay outside the loop when it comes to official internal communications. However, with a little modification, the most common intranet solutions can become even more useful, personalized, and inclusive.

The Microsoft 365 platform has earned a reputation as one of the most widely used productivity solutions in business. By the end of 2022, it had more than 345 million monthly users. Nearly half of companies across the world run internal communications using Microsoft 365. That's why one way to a better intranet may be to boost and build on the strengths of the Microsoft 365 environment.

An intranet can let employees be a little less tech-savvy, while offering them more features that are useful in their everyday work. Each employee will retain access to all the tools, features, and business processes used in their organization. They will be able to handle anything that can be done remotely right from the homepage, without having to switch between apps. The biggest changes will involve simpler access, a more user-friendly interface, and even more personalized content selection. On top of that, this content will be available much faster than before, even in multicloud environments.

An integrated, personalized, and smart approach to supporting employees in the pursuit of organizational goals is the future of internal communication – and innovative communication methods can facilitate this process.

Here are the key advantages of our Intranet Solution Accelerator. Take your digital transformation to the next level by partnering with Avenga.

Avenga intranet in the Microsoft 365 ecosystem

1

Universal accessibility

2

Seamless integration

3

Precision in reach

4

Improved search

5

Lightning-fast performance

6

Ultimate flexibility

Avenga intranet

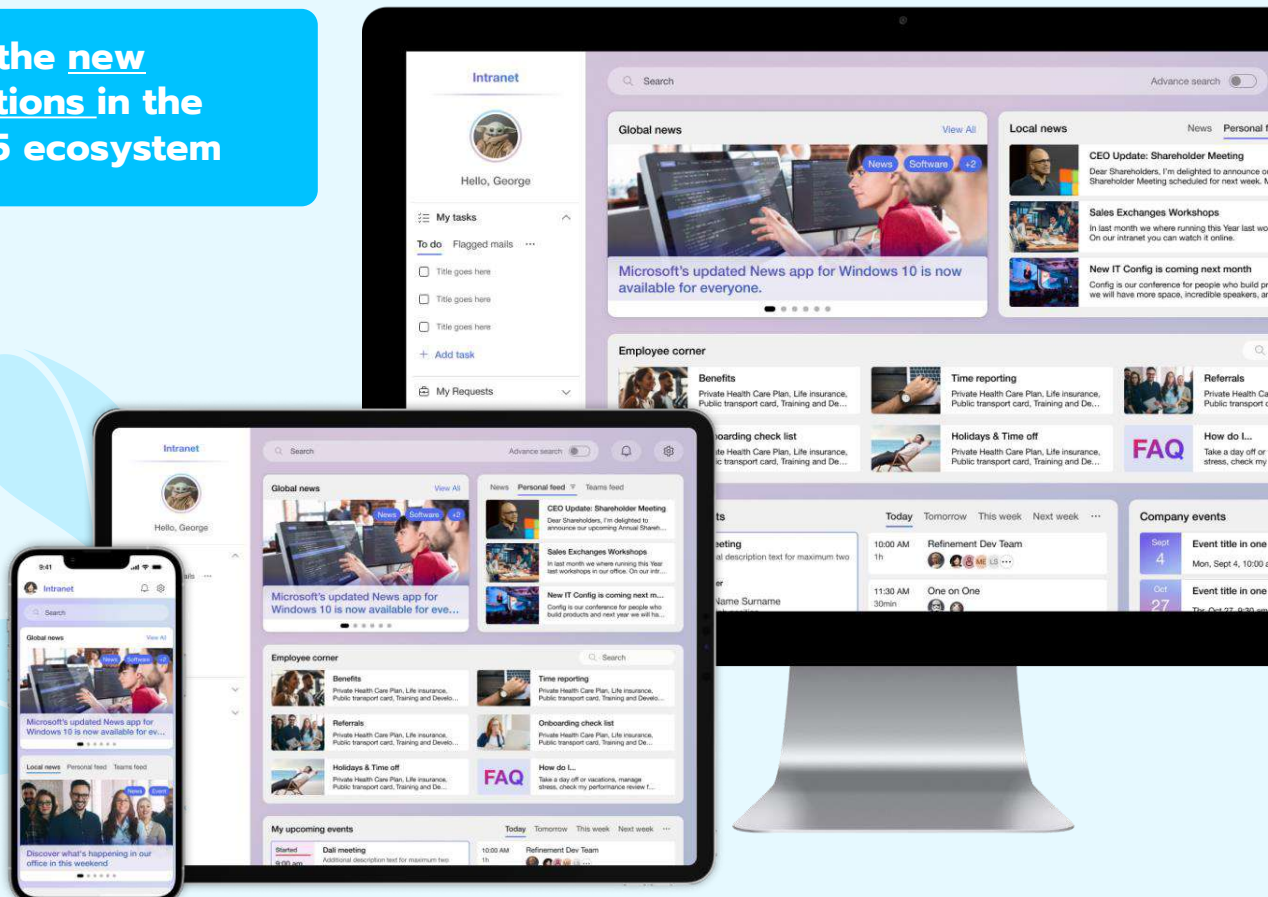

1

Universal accessibility

The intranet is available as a progressive web application (PWA) for employees. As a result, it can be used via a browser, a smartphone or a tablet. Its appearance adapts to the type of device used.

Quick and easy access to the latest news, updates, and important information keeps every employee in the loop, informed, engaged, and empowered.

Avenga intranet

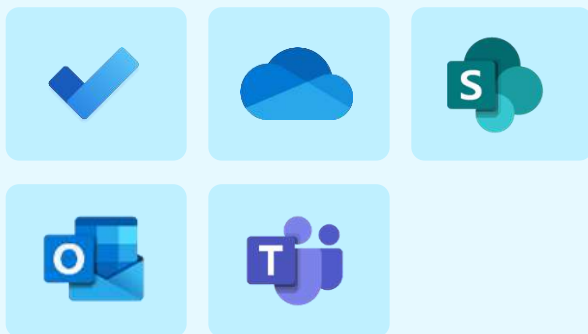

2

Seamless integration

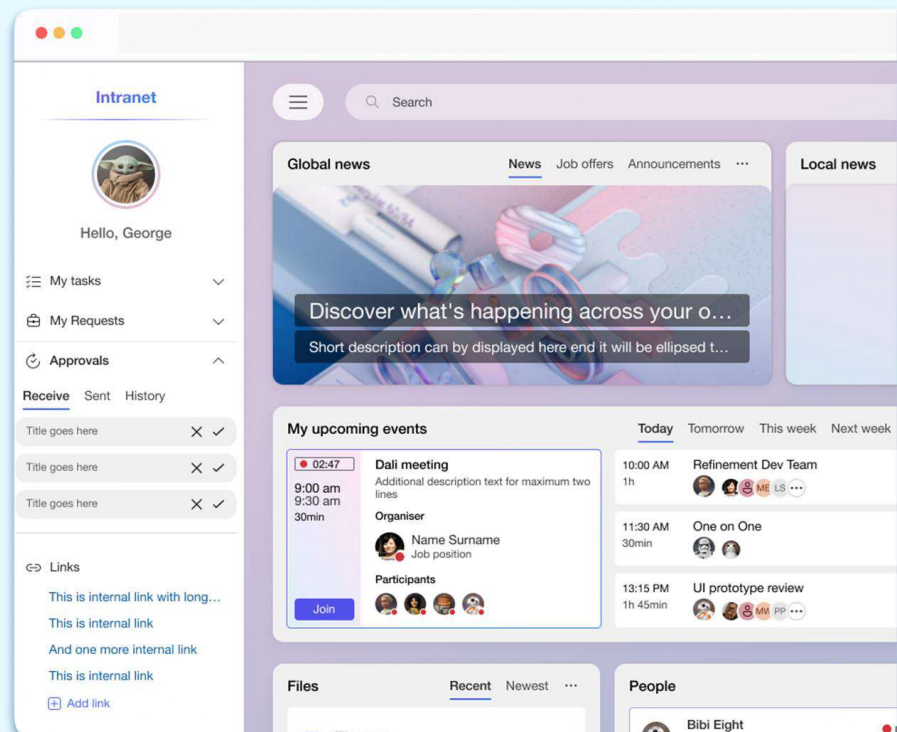

The interface of the integrated intranet does not require the user to switch between applications – all the necessary data is available at all times. This reduces the number of clicks required to reach the relevant content.

Thanks to the integration of approvals from various intranet applications and task automation (Microsoft Power Automate service), employees can get anything done remotely right from the homepage.

If you use third-party solutions that come with APIs – such as Google or Jira, you can easily integrate them with your intranet.

3

Precision in reach

The SharePoint intranet site becomes a dynamic, interactive hub that organizes and selects content based on individual user profiles. When extended, the intranet landing page uses SharePoint Target Audience and Home Site. This lets you accurately identify the recipients of the information distributed.

Content can be tailored to specific organizational roles (e.g. managers), departments (e.g. HR, sales) or competency areas. It's also possible to create content in different language versions. As a result, everyone gets personalized, relevant, and valuable updates.

Internal communication and knowledge sharing have never been so easy and effective.

Avenga intranet

4

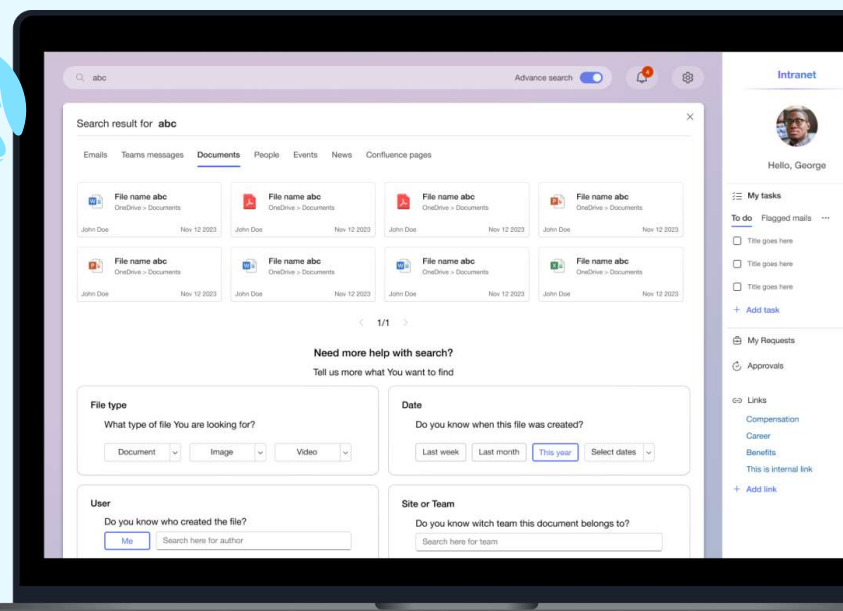

Improved search

The search engine is easy and intuitive to use; it's also super-fast. High-performance engines make every piece of content and information delivered to your screen in the blink of an eye. Wizards are tailored to each search source, filtering and narrowing the results down to the most precise, accurate ones.

You can use the filtering function to get the most accurate and relevant results. You can browse through your emails, documents, team messages, calendar events, and news. The search engine also works with third-party tools integrated with the intranet – like Jira.

The search engine module can be configured according to the needs of the organization – for instance, to search through a specific directory of company documents.

Avenga intranet

5

Lightning-fast performance

Unrivaled performance

Best performance among existing and available solutions. This is thanks to an innovative query grouping mechanism and an intelligent cache system.

Saving time

The intranet landing page loads in under one second. Powerful engines ensure that every piece of content and information and every update is delivered to your screen in the blink of an eye.

Avenga intranet

6

Ultimate flexibility

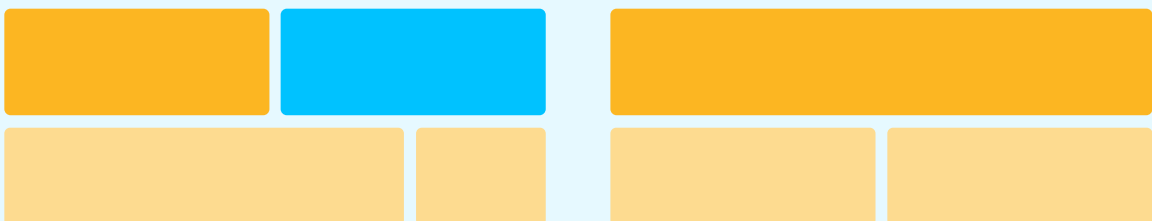

Personalized solution

The available intranet features can be modified to suit the needs of your entire organization and each individual employee. Each element of an intranet landing page is designed as a component of the SharePoint Framework (SPFx).

Intuitive and user-friendly technology

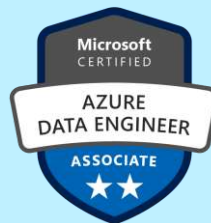

The intranet is user-friendly – it makes the user's work easier and smoother, which translates, for example, into increased productivity and a wider spread of knowledge.

Avenga's competencies

The status of a certified Microsoft Solutions Partner in the areas of Data & AI and Digital and App Innovation is a testament to the high quality of our solutions and the equally high level of our industry qualifications. Our close, long-standing partnership with Microsoft and the large number of successfully completed projects and designed solutions make us a valued and reliable technology partner.
